Dates: 2-3 February, 2022

2-3 March, 2022 6-7 April, 2022 4-5 May, 2022 1-2 June, 2022

Time: 10.00-15.30: 2/2, 2/3, 6/4, 4/5, 1/6

09.00-15.30: 3/2, 3/3, 7/4, 5/5, 2/6

Location: Aarhus University or online (see p. 3 for more detail)

Lectures: Ali Amidi (AA; ali@psy.au.dk)

Anne Scharling Rasmussen (ASR; annesr@psy.au.dk)

Kaare Bro Wellnitz (KBW; kaare@psy.au.dk)

Mia Skytte O'Toole (MSO; mia@psy.au.dk)

Course description

Objective: The aim of this course is to provide participants with a broad, intermediate-level competence in carrying out common quantitative psychological analyses using IBM SPSS Statistics software as well as to introduce a few subjects on more advanced statistics using IBM SPSS Statistics software as well as R.

Content: The course begins with a brief review of basic statistical concepts and tests followed by more detailed instruction on: (i) Multiple regression including mediation/moderation; (ii) Factorial ANOVAs, (iii) Logistic regression, (iv) Factor Analysis and Structural Equation Modelling; and (v) Multi-Level Modelling. Please note that this course assumes previous undergraduate knowledge of introductory statistics. It is recommended that if you need a brush-up, you review the suggested readings for the first two days of class before the course begins.

Format and Evaluation: The course includes a combination of lectures and practical instruction using SPSS and R software. Focus will be on giving participants hands-on experience with each type of analysis. Practical exercises will be assigned for each session; some of these exercises will be done collectively during the teaching day and others must be completed independently.

The course consists of five modules in total. In order to receive a certificate of completion and ECTS points for a module, participants must submit and receive approval of the corresponding assignment. The specific number of ECTS points awarded is determined as follows: 1 assignment + 2 days of attendance = 3 ECTS (1 module); 2 assignments + 4 days of attendance = 6 ECTS points (2 modules); 3 assignments + 6 days of attendance = 9 ECTS points (3 modules), 4 assignments and 8 days of attendance = 12 ECTS points (4 modules), all 5 assignments + full attendance (10 days) = 15 ECTS points (5 modules).

Priority will be given to students who can attend all of the course, but it is possible to attend specific modules if space is available. **Notice that certification for a module only is awarded if the corresponding assignment is submitted and approved, and that certificates are not sent out, until the whole course is finished.**

Expected workload: 100-150 pages per course day as well as homework assignments.

The due dates for the homework assignments are as follows:

Assignment 1: February 24, 9am Assignment 2: March 24, 9am Assignment 3: April 28, 9am Assignment 4: May 26, 9am Assignment 5: June 23, 9am

Please email your assignment in word document or PDF format to the relevant instructor (see email addresses on the cover page).

Getting in Contact with Us

Open dialogue and co-operation is important to us, and we encourage you to use us to your best advantage. If you have questions about the class, special needs, or require clarification regarding the course requirements, please ask! Similarly, if you are having difficulty understanding something, don't stay quiet. We can't help you if you don't let us know that you're having trouble!

Readings and Resources: The core reading material is Field, A. (2018). *Discovering Statistics Using SPSS, 5th Edition.* Sage Publications + readings on confirmatory factor analysis and SEM using Lavaan in R.

An 'Additional Reading' list is also outlined in this booklet. These readings are not part of the core curriculum for this course but are listed here for your information, as some of you may find it helpful to consult a secondary or more advanced resource if and when you have to run these analyses on your own.

A Brightspace webpage will be made for the course where we will upload PowerPoint slides, answers for the assignments, links to additional materials, etc. Announcements will also be posted on the course website throughout the semester, so please ensure you can receive emails from the system.

A detailed schedule and core/additional reading lists for the course are provided on the following pages. Please note that minor modifications to the schedule may be required as the course progresses.

Location

Aarhus University, Bartholins Allé 10 (building 1325) and Bartholins Allé 14 (building 1327)

Module 1: (2/2-3/2): 1325-440

Module 2: (2/3-3/3): DAY 1: 1325-240 (10:00-12:00) + 1325-136 (12:00-15:30).

DAY 2: 1325-440

Module 3: (6/4-7/4): DAY 1: <u>1327-026</u>. DAY 2: 1325-440 **Module 4:** (4/5-5/5): DAY 1: 1327-026. DAY 2: 1325-440

Module 5: (1/6-2/6): 1325-440

Please note that the start time on DAY 1 of each teaching block is **10:00** to 15:30. On DAY 2 of each teaching block the start time is **09:00** to 15:30

Due to factors related to the pandemic, some parts or modules on the course may be taught online. This will be decided from module to module.

Detailed Course Schedule and Reading List

	Date		Content	Literature
1.	2/2 22	ASR	Fundamentals Review of the SPSS, statistical assumptions, effect sizes and confidence intervals, correlation, t-tests	Field, A. (2018) chapters 1 - 7, 10
2.	3/2 22	ASR	ANOVAs I One way and repeated measures ANOVA, advanced post hoc analysis, missing data, sample size, power analysis, introduction to Bayesian statistics and bootstrapping	Field, A. (2018) chapters 12,15
3.	2/3 22	AA	Linear regression I Simple and multivariate regression	Field, A. (2018) chapters 8 - 9
4.	3/3 22	AA	Linear regression II Mediation and moderation in regression	Field, A. (2018) chapter 11
5.	6/4 22	ASR	ANOVAs II Advanced ANOVA designs: Factorial ANOVA, Mixed ANOVA	Field, A. (2018) chapters 14 - 16
6.	7/4 22	ASR	Categorical data analysis X ² , logistic regression	Field, A. (2018) chapters 19 - 20
7.	4/5 22	KBW	Factor Analysis Reliability tests, exploratory factor analysis, introduction to R	Field, A. (2018) chapter 18 Field et al., (2012) chapter 3
8.	5/5 22	KBW	Structural Equation Modelling Confirmatory factor analysis and structural equation modelling	Byrne, B. M. (2016) Rosseel, Y. (2021) Ullman, J. B. (2013)
9.	1/6 22	MSO	Multi-Level Modelling I	Field, A. (2018) chapter 21
10.	2/6 22	MSO	Multi-Level Modelling II	Field, A. (2018) chapter 21

Core Readings:
